SUPPLEMENTARY INFORMATION:

I. Abstract

Since 1998, the National Science Foundation (NSF) has supported interdisciplinary training of doctoral students across the nation through the Integrative Graduate Education and Research Traineeship (IGERT) Program. NSF awards IGERT grants to institutions that develop innovative, interdisciplinary doctoral training programs in science, technology, engineering, and mathematics (STEM) disciplines. Unlike traditional graduate research or teaching assistantships, IGERT provides doctoral students with unrestricted funds, including a living stipend plus tuition and fees. NSF intends to conduct an implementation evaluation of the program to learn what program elements are most effective in fostering interdisciplinary

collaborations, research, and learning. Specifically, the evaluation will assess the program's perceived progress towards its three goals of fostering interdisciplinary education, recruiting and retaining a diverse population of graduate students, and catalyzing cultural change within institutions to better support interdisciplinary endeavors. Data from this collection will be used by NSF to respond to OMB and congressional inquiries, document best practices for training interdisciplinary scientists, and inform decisions about future project modifications.

II. Method of Collection

Data will be collected via interviews and surveys from faculty members and students who have participated in the five most recent cohorts (2005–2009) of IGERT projects.
